三、语法填空（共 10 小题，每小题 1 分，满分 10 分）

阅读下面短文，在空白处填入一个适当的单词或用括号内所给单词的正确形式填空。

People believe that almost all children are born clever kids. The problem is how to stay clever as they are growing older. Being careless and patiently (patient) will not only be bad for learning, but also for their future life.

A famous scientist (science) once said that a troubled heart is a distracted (注意力分散的) mind. If problems are always on his mind, it's hard to focus. Some students think their parents are strict about them and can't get on well with them. Some students always keep worries to themselves (they), and this drives them even mad (mad). Others don't know how to deal with their problems. Feeling helpless, they have no choice but (41) to give (give) up.

My cousin had the same problems. Although he knew his parents and teachers cared, he didn't know how to talk about his problems. He bought a book on how to achieve a balance between study and play. He found its advice was worth to follow (follow). For example, the book advises that when studying, full attention should (44) (pay) to the lessons. It also points out the importance of growing up in a well-rounded way.

Since then, everything has changed (change) for my cousin. We hope more and more students like my cousin will find their path to growth.

A. Young people face a lot of pressure.

B. It is a way to avoid difficulties.

C. It helps young people find inner peace.

D. It gives young people a way to care for themselves.

14. Which of the following sentences is right?

A. The phrase "*Love You, Old Self*" can help them make more new friends.

B. The phrase shows they are old enough to take care of themselves.

C. The trend of "*Love You, Old Self*" makes the idea of self-care become real.

D. The phrase makes young people become lazy and not want to face hard times.

15. What is the main idea of the passage?

A. How to take good care of oneself.

B. The importance of being kind to oneself.

C. The pressure that Chinese young people face.

D. The popularity and benefits of a self-care trend.

B

In the digital (数字) age, teenagers spend more time than ever on electronic devices (设备)— phones, pads and computers. But have you ever wondered how screen time influences reading speed? A recent study explored this question.

Researchers divided a total of 300 middle school students into four groups based on their average (平均的) daily screen time: Group 1 (less than 1 hour), Group 2 (1-2 hours), Group 3 (2-3 hours) and Group 4 (more than 3 hours). Students from different grades and schools were chosen to make the results more scientific. All students were given the same 500-word passages to read, and their reading speed (tested in words per minute, WPM) was recorded. During the test, students were not allowed to use any electronic tools, ask for help, or discuss with their classmates. They were also required to finish reading the passage within 10 minutes.

The study showed a clear link between screen time and reading speed. Group 1 had an average reading speed of 180 WPM, while Group 2 reached 155 WPM. Group 3 dropped to 120 WPM, and Group 4 was the slowest at only 90 WPM. Experts explained that long screen time makes people get used to short, fast-paced (快节奏的) information like short videos, which weakens their ability to pay attention to longer, more difficult texts for long periods. This not only slows reading speed but also harms the ability to understand the text's deeper meaning.

However, the study also pointed out that not all screen time is bad for reading skills. Spending 30 to 60 minutes a day reading e-books can actually improve vocabulary and reading fluency (流畅性). The key is to balance screen time with offline reading activities. Teachers and parents are advised to guide students to make reasonable plans for screen time instead of just stopping the use of electronic devices.

16. Why did the researchers choose students from different grades and schools?

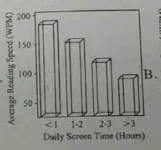

A. To get more support for the study.

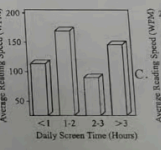

B. To make the result believable and fair.

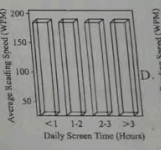

C. To let more people be interested in the study.

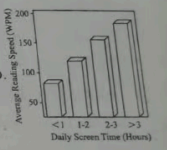

D. To compare students who read at different levels.

17. Which of the following can show the relationship between WPM and daily screen time?

A.

B.

C.

D.

18. Why does long screen time slow down reading speed?

A. It makes people get used to short and fast information.

B. It makes people avoid reading long and difficult texts.

C. It takes up much time in understanding the video deeply.

D. It makes people lose their interest in watching short videos.

19. How does the writer organize the text?

A. By telling a story and explaining a rule.

B. By introducing a fool and describing its use.

C. By asking a question and presenting a study.

D. By comparing two objects and showing the result.

20. What might the writer talk about next?

A. Types of electronic devices for students.

B. Ways to balance online and offline reading.

C. Differences between e-books and paper books.
