

B (建议用时: 9 分钟)

Stella Tian is a 33-year-old office worker in Beijing. She has two young children: a one-year-old baby and a three-year-old kid. Because she and her husband are very busy with work, they have two nannies (保姆) to help care for their children and do daily housework.

2 "I have changed my ^{保姆} nannies several times," Tian said. "Some were not good at their jobs and didn't get along well with my family. Others left because of personal plans. It's hard to find a good nanny who will stay long."

3 Stella's trouble is quite common among many city families in China. The market demand (需求) for homemaking services keeps rising year by year. Millions of middle-class families, mostly those with young children and ageing family members, are eager for well-trained domestic (家务的) workers. Trained domestic helpers, nannies and nurses for the elderly are in great demand. This rapid growth clearly shows that modern families are depending more and more on professional home services to balance their busy work and family life, as they hardly have time for housework themselves.

B₃

5 Sheila Irvine, a 70-year-old woman who took part in the test, shared her story. After spending many hours learning to use the new system, she can now read books again. "It is amazing," she said with a big smile.

6 This technology is still in its early stages, but it offers great hope for millions of people with eyesight problems.

(B) 21. The eye illness _____

- A. mainly affects young people X
- B. harms the front part of the eye
- C. cannot be effectively treated yet
- D. can be stopped by eating healthy food

(B) 22. What is the correct order of how the chip system works?

- ① The black box makes the picture clearer.
- ② The glasses send signals to the chip inside the eye.
- ③ The camera in the glasses takes a picture.
- ④ The chip helps the brain understand the pictures.

A. ③→②→①→④

B. ③→①→②→④

C. ②→③→①→④

D. ①→③→②→④

(A) 23. What does Paragraph 4 mainly talk about?

- A. How the chip system works to help patients see.
- B. Why the tests were done at 17 hospitals in Europe.
- C. What patients think about the black and white pictures.
- D. How patients practise using the new chip system.

(B) 24. What can we infer from Sheila Irvine's words in Paragraph 5?

- A. She thinks the training process is surprisingly easy.
- B. She believes the technology is already perfect for everyone.
- C. She feels excited about getting her ability to read back.
- D. She is thankful that the pictures are finally in color. X

China was much (39) better (good) than I imagined! The more I learned, the more I shared. My family's interest grew.

五 Although I told them many things, they still wanted to see everything
其 by (40) themselves (them). They read books and searched online. Every night, my grandpa called me and said he found another place he must see. He planned the trip (41) carefully (careful).

In the spring of 2024, my family arrived. What (42) a happy meeting! Their two weeks were full (43) of surprises. My grandpa even made a new friend. My family loved the clean and orderly cities with rich culture. And they especially enjoyed the food! They didn't know so many different tastes could come from just (44) vegetables (vegetable) and meat.

But most of all, knowing about my everyday life (45) helping (help) them understand my choice. They miss me, but they are pleased that China is now my home. They saw it with their own eyes.

F. Family meals are important, but with busy schedules, it's not always easy to gather everyone at the same table.

III. 语法填空(10 分)(建议用时:8 分钟)

阅读下面短文,在空格处填入一个适当的词或使用括号中词语的正确形式填空。(共 10 小题,每小题 1 分)

My parents and family taught me many things about life. I believe it is fair (合理的) to help them back. Because they always helped me with my studies, I shared my new knowledge after my university classes. At dinner, I used to tell them about Chinese history, philosophy, books, (36) and modern life.

This made them interested in China, and they saw China through my eyes. But when I studied in Italy, China (37) was seen (see) only through my teachers' words. In 2019, I finally went to Beijing (38) to study (study). Then, I could tell my family my own thoughts about China: its wonders, its amazing food, and its kind people. I found

- C. By comparing home services in different countries. X
D. By giving advice to families who need nannies.

C (建议用时: 10 分钟)

Scientists have made a new breakthrough to help people with serious eyesight problems see again. They have created small electronic chips, only 2 mm wide, which are put inside the eye. However, these chips cannot work alone — they must be used together with special glasses.

3 The technology was recently tested on 38 patients who had a serious eye disease. This disease mostly affects old people and ~~damages~~ the central part of their sight, making activities like reading and recognizing faces very difficult. In the United States, about 20 million people have this disease. Sadly, there is no good treatment for it at present.

3 The disease destroys the light-sensitive cells (感光细胞) at the back of the eye. Normally, these cells change light into electrical signals (电信号), which then go to the brain and tell it what the eyes are seeing. When these cells are damaged or dead, the brain receives no information, and people cannot see properly.

4 The tests were carried out at 17 hospitals in Europe. The tiny chips are designed to take the place of the job of the damaged cells. When a patient wearing the special glasses looks at something, a small camera in the glasses takes a picture. The picture is then sent to a small black box, which makes it clearer and sends it back to the glasses. The glasses then send signals to the chip inside the eye. Patients need to spend time practising to help their brains understand the new pictures. Although the pictures are only in black and white, the chip has brought light back into their dark world.

④ However, the whole industry faces two challenges. First, the number of professionally trained workers is far from enough. Official data from the Ministry of Human Resources and Social Security shows China has a shortage of more than 20 million domestic workers. Second, families' service needs have become not as simple as before. They don't just need someone to clean the house. For example, many young parents hope their nannies can speak basic English or help with early education for their children.

⑤ To solve these problems, the Chinese government has made a plan to help train more people and make sure the services are of high quality. They will set up special training programs and create more jobs for people who want to work in this field.

- (C) 16. What can we know about Stella's family life?
- A. Stella prefers to stay at home.
 - B. Stella's children are easy to care for.
 - C. Getting long-lasting childcare is challenging.
 - D. The family enjoy relaxing together at weekends.
- (B) 17. What does wanting nannies who speak English tell us?
- A. English is a very important language to learn.
 - B. Some families have special needs from helpers.
 - C. Many families want their kids to study English.
 - D. Nannies who speak English are difficult to find.
- (D) 18. What does the underlined word "They" in Paragraph 5 refer to?
- A. Families who need domestic services.
 - B. The problems of home services.
 - C. People who want to work in this field.
 - D. The Chinese government.
- (C) 19. What can be inferred about the future of homemaking services in China?
- A. The market will stop growing because of high service prices. X
 - B. Families with young children will need such services mainly. X
 - C. The quality of services will probably improve with official support.
 - D. Nannies who speak English will no longer be needed in the future.

(A) 20. How does the writer develop this passage?

- A. By telling a story and then explaining a social problem.
- B. By listing different kinds of families in China. ✕
- C. By comparing home services in different countries. ✕
- D. By giving advice to families who need nannies.

C (建议用时: 10 分钟)
