阅读下面短文，在空白处填入一个适当的单词或括号内单词的正确形式。

On October 1st, the world lost a true hero—Jane Goodall, a name many of us know from Junior High 7B textbooks. She passed away peacefully in California ___36___ (at) the age of 91. As a United Nations Messenger of Peace, she spent most of her life protecting animals and our planet, travelling across the world, including giving speeches in Shenzhen schools ___37___ (spreading / to spread) her message.

In the past, Dr Goodall ___38___ (praise / was prised) for her groundbreaking work with chimpanzees in Tanzania. It was ___39___ (unusual) for a woman to do that hard job in the 1960s, when few girls studied science. She was the ___40___ (first) （one） to find that the animals could use tools. It is a discovery as well as a powerful ___41___ (truth) (true) that humans and animals share similar emotions.

But Jane did more than ___42___ (what) people expected a woman to do at that time. She never minded ___43___ (to work / working / mind doing sth) tirelessly to protect their homes and encouraged people to treat the Earth with kindness.

When she was a 16-year-old school girl, Jane dreamt of a career studying wild animals in Africa. Her mother always said to her,"Work hard and never give up!" And that's ___44___ (exact / exacts / exactly) what she did.

Jane Goodall's life reminds us that no action is too small to make a difference. ___45___ (Although) she is no longer with us, her spirit will continue. Whether it's planting a tree, saving water, or protecting animals, each of us can help create a better world.
