

第二卷 非选择题(25 分)

III. 语法填空(10 分)(建议用时:8 分钟)

阅读下面短文,在空格处填入一个适当的词或使用括号中词语的正确形式填空。(共 10 小题,每小题 1 分)

What if your PE teacher were a robot? Sounds like science fiction, right? But it's already happening in (36) a primary school in Dongguan, Guangdong Province.

In 2026, Nancheng Sunshine Second Primary School introduced AI sports equipment (37) to its campus. The school placed AI exercise machines in the hallways, AI (38) cameras (camera) on the running track, and multi-function AI testing stations in the gym. During breaks, students rush to these machines and line up (39) excitedly (excited) to challenge themselves in AI rope skipping, AI jumping jacks (开合跳), and even 50-meter sprints.

What can these AI devices do? They can count exactly how many times you skip, record how fast you run, (40) and even analyze

whether your movements are correct. The system automatically (自动地) records (41) your (you) results and gives real-time feedback on a screen — just like playing a video game. Every workout shows visible progress, which makes exercise (42) feel (feel) more like fun than hard work. make sb./sth. to do sth.
使某人/物做某事

In the first week alone, the number of students actively exercising doubled from 30% to 60%!

The PE teachers are also happy because these “AI assistants” can automatically time, count, and record scores. This gives teachers more time to help each student instead of just (43) writing (write) down scores. All students' sports information (44) is collected (collect) and stored in the system every day. Teachers can check students' progress easily at any time.

This exciting project shows how technology can make exercise (45) more enjoyable (enjoyable) than before. So next time you feel tired of running or skipping, imagine having an AI coach that cheers you on and tells you exactly how to improve!

IV. 书面表达(15 分)

某英语学习网站正在开展以“Great Ideas”为主题的征文活动。请你根据以下思维导图的内容提示,写一篇英语短文投稿,介绍屠呦呦发现青蒿素 (artemisinin) 的伟大想法。

What was the problem?

(Malaria was killing many people.)
